

Advancing evidence-informed action to empower women

About 3ie evidence impact summaries

[Read](#) how 3ie verifies and classifies evidence impact

Highlights

Evidence impact

- Findings of the 3ie-supported review were cited in documents which define the Gates Foundation's activities and investments related to gender equality and women's empowerment.
- Review findings prompted the Gates Foundation to fund a new Evidence Consortium for Women's Groups focused on filling evidence gaps for Asia and Sub-Saharan Africa.

Factors that contributed to impact

- The authors engaged with potential users, making presentations to interested high-level donor representatives and responding to specific queries from them using review evidence.

Systematic review details

Title: [Economic Self-Help Group Programs For Improving Women's Empowerment: A Systemat...](#)

Authors: Carinne Brody, Thomas de Hoop, Martina Vojtkova, Ruby Warnock, Megan Dunbar, Padmini Murthy, Shari L. Dworkin

Status : Completed December 2015

Context

Across the world, women have unequal access to health, education, livelihoods and public and political spaces. Governments, development agencies and grassroots organizations promote and support self-help groups (SHGs) of women to address these inequalities and empower women. Economic SHGs are groups that begin with a period of collective saving before providing the women members access to banking, loans and capital. Some SHGs and their federated bodies also provide training and mentorship for members to access social protection, participate in community activities or set up and form individual or collective enterprises.

Given that the approach had been widely used and studied, it was necessary to systematically review the evidence and come to a balanced understanding of the effectiveness of economic SHGs in promoting women's individual empowerment in low- and middle-income countries. ³ie supported Brody et al. (2015) to review rigorous mixed-methods evaluations from 1980 to January 2014 to fill this synthesis gap and provide perspectives from the women SHG participants.

Evidence

The review's analysis of 23 quantitative and 11 qualitative studies found that economic SHGs have positive, statistically significant effects on women's empowerment, including economic, social and political empowerment.

Economic SHGs that included a training component related to financial, business or life skills have a larger effect than those that did not. Overall, there was no evidence of any adverse effects, such as domestic violence, stemming from economic SHGs. While women perceived themselves as psychologically empowered, there was no evidence of positive effects on women's psychological empowerment (capability to speak out and participate in household decision-making).

The integrated quantitative and qualitative evidence indicated the pathways through which SHGs could achieve the identified positive effects. The pathways include: familiarity with handling money and independence in financial decision-making; increased understanding of political contexts; mutual solidarity; improved social networks; and respect from the household and other community members. However, in line with more recent evaluation evidence, including from 3ie's [NRLM evaluation](#), the synthesis of the qualitative evidence also indicated that economic SHGs may exclude the poorest of the poor women

Evidence impacts

Informed a donor's global empowerment model

The Bill & Melinda Gates Foundation has used the 3ie-supported review's findings in its [Global Framework for Advancing Women's Empowerment](#) and [Empowerment Model](#). The framework and model guide the foundation's activities and investments as part of its gender equality strategy. They cite findings from the 3ie-funded review as evidence that participating in economic self-help groups reflects women's agency and is an element of collective action that can transform power relations.

Prompted the research agenda of a new evidence consortium

The review's findings around the need to a) improve the rigour of the evidence base around the effectiveness and cost-effectiveness of economic SHGs and b) enhance understanding of the pathways by which they empower women prompted the Gates Foundation to establish and support the interdisciplinary [Evidence Consortium for Women's Groups \(ECWG\)](#), whose learning agenda draws from the review, apart from other resources. ECWG is led by the American Institutes of Research and Population Council, and includes several other academic and research institutions.

Evidence impact summaries aim to demonstrate and encourage the use of evidence to inform programming and policymaking. These reflect the information available to 3ie at the time of posting. Since several factors influence policymaking, the summaries highlight contributions of evidence rather than endorsing a policy or decision or claiming that it can be attributed solely to evidence. If you have any suggestions or updates to improve this summary, please write to influence@3ieimpact.org
